

Environmental Fact Sheet

FINAL MODIFICATIONS TO THE WOOD PRESERVING REGULATIONS

The Environmental Protection Agency (EPA) has promulgated a final rule that modifies several components of the regulations established in 1990 for managing wastes generated in the wood preserving industry. EPA initially proposed such modifications in the December 5, 1991 Federal Register.

Background

On December 6, 1990, EPA published in the *Federal Register* a final rule listing three categories of wood preserving wastes as "hazardous." The rule subjected the management of these wastes to regulation under the Resource Conservation and Recovery Act (RCRA) and established standards for managing hazardous wastes on "drip pads," a containment and collection system commonly used in the wood preserving industry.

Following promulgation of the December 1990 rule, EPA and industry representatives together identified problems with implementing and interpreting the regulations. As a result, EPA published a notice of proposed rulemaking in the *Federal Register* on December 5, 1991 to modify the wood preserving regulations, and requested public comment on the proposal.

Action

EPA has evaluated the comments received and is now making final a set of modifications to the wood preserving requirements, not unlike those proposed in 1991. The modifications amount to
